## AS-4052 High Performance Hybrid Sealant

ALSEAL High Performance Hybrid Sealant is a high modulus sealant based on advanced MS Polymer technology. It is a singlecomponent elastomeric sealant with superior weathering, UV, and temperature resistance. It is solventless and isocyanatefree; ensuring that the cured sealant will not shrink or have bubbling issues. It is also free of silicone oil, minimising building aesthetic issues caused by oil-staining and dirtstreaking problems often associated with silicone sealants.

### Applications:

Suitable for high strength sealing and bonding in construction, automotive, and industrial applications. It is specially formulated for structural joint that will be subjected to dynamic stresses. Ideal for bonding of plastics (nylon, PVC, ABS, polycarbonate, etc.), metals (stainless steel, aluminum, steel, copper, etc.), rubber (natural rubber, synthetic rubber, EPDM, etc.), natural materials (wood, plywood, leather, cloths, paperboard, etc.) and inorganic substrates (concrete, mortar, natural stone, tile, glass, porcelain, etc.)

Available colours: White, grey, black

Product Code	Content	Carton Quantity
AS-4052	290 ml / Cartridge	20 / Carton
AS-4052S	600 ml / Sausage	20 / Carton

### Features:

- ✓ High modulus
- ✓ High strength structural bonding
- ✓ Good UV resistance
- ✓ Paintable
- ✓ Isocyanate-free – No air bubbling
- ✓ Solvent-free – No shrinkage
- ✓ Primerless bonding to most substrates
